

Troubleshooting TeamViewer®

AVIMARK®

TROUBLESHOOTING TEAMVIEWER

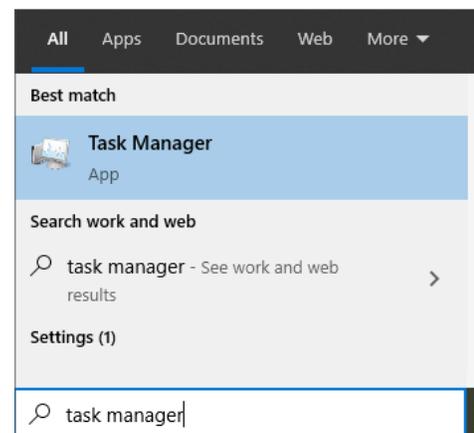

Overview

This guide will provide some things to try when TeamViewer gives you a TV ID number but not a password.

The most likely reason a password is not available or the default password is not working is because there may be multiple TeamViewer sessions running in the background processes of Windows®.

Ending TeamViewer Sessions

1. From the Windows **Search Bar**, enter **Task Manager**.
2. With Task Manager highlighted from the search results, press **Enter** to open Task Manager.
3. On the **Processes** tab, scroll down through the background processes until you see TeamViewer. The processes are listed in alphabetical order.
4. Click on the first TeamViewer listed to select it.
5. Click **End Task**.
6. Repeat steps 4 and 5 for each TeamViewer process listed.

A screenshot of the Windows Task Manager window, specifically the 'Processes' tab. The window title is 'Task Manager' and it has a menu bar with 'File', 'Options', and 'View'. Below the menu bar are tabs for 'Processes', 'Performance', 'App history', 'Startup', 'Users', 'Details', and 'Services'. The 'Processes' tab is active, showing a list of running applications. The list has columns for 'Name', 'Status', 'CPU', 'Memory', and 'Disk'. The 'CPU' column shows 11%, 'Memory' shows 42%, and 'Disk' shows 2%. The list is sorted alphabetically by name. The following table represents the data shown in the screenshot:

Name	Status	11% CPU	42% Memory	2% Disk
Apps (10)				
> Adobe Acrobat DC (32 bit)		0%	282.1 MB	0 MB/s
> Adobe Fireworks CS6 (32 bit)		0%	151.7 MB	0 MB/s
> AVImark.exe (32 bit) (4)		0%	59.1 MB	0 MB/s
> AVImark.exe (32 bit) (3)		0%	56.0 MB	0 MB/s
> AVImarkServer.exe		0%	30.8 MB	0 MB/s
> Google Chrome (4)		1.6%	363.6 MB	0.1 MB/s
> Microsoft Outlook		0%	194.6 MB	0 MB/s

Make sure to watch the TeamViewer for a moment or two. It will frequently restart again even though we are not able to gain access to the workstation through it. If it starts again, please go through steps 4 and 5 again; it typically will only restart once.

TROUBLESHOOTING TEAMVIEWER

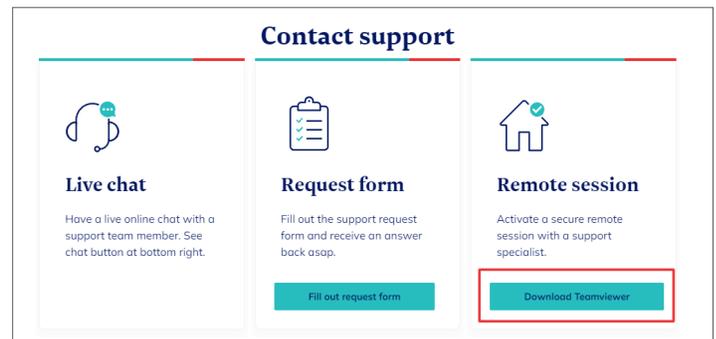

Downloading TeamViewer

Downloading TeamViewer after closing all previous sessions is the best way to provide the AVImark Support Team remote access.

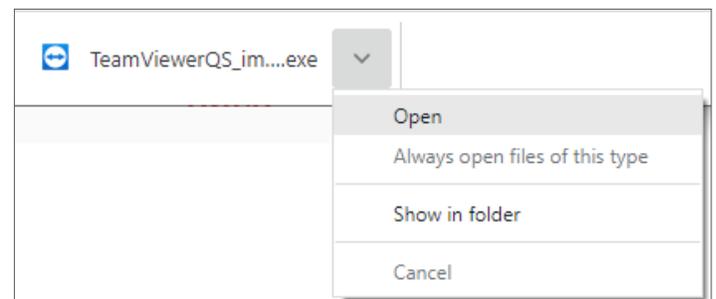

If the local IT has already installed a version of TeamViewer of their own (not from the AVImark website) and it does not allow AVImark Support to login, the business may need to download TeamViewer from AVImark specifically.

1. After all TeamViewer sessions have been ended, click on the link provided to download TeamViewer from the Covetrus® website: [Download TeamViewer](#).

There is also a link to **Remote Access** at the top of the Covetrus® page. Mouseover and select the TeamViewer download for the practice management program you are using.

2. If using Chrome® as your browser, the TeamViewer download may appear at the lower left side of the window. Click on the chevron to display the menu.
3. From the menu, click on **Open**.

If an error displays immediately after downloading that reads "there is another instance of TeamViewer running, please close this instance to proceed", use the Task Manager to close as previously noted in these instructions.

TROUBLESHOOTING TEAMVIEWER

4. The TeamViewer connection should open displaying the ID number for the computer you are working on. The password will display with ****. It may also display a password.
5. Please relay what is displayed for the ID and password to the AVImark Support Technician to allow remote access to the computer.
