Please use the bookmark menu on the left to navigate between each project and feature.

Treatment Pick List Window

A Pick List or Associated Entries window has been created in AVImark and is designed to display linked entries and allow the user to pick those linked entries that are to be posted. This new window is accessible directly from Medical History.

Auto-Prompting for Pick List
This window can be automatically displayed at the time the parent entry is posted in Medical History.

- Locate the desired service in the Treatment List and open the Change Treatment window. Remember that if you choose to use this on a group treatment the parent treatment does not get posted to Medical History, therefore you will not be able to access the Pick List window after closing the automated display.
- From the "Associated Entries" tab link the desired entries and check the option "Prompt for Associated Entries". You must check this option in order to access the Pick List window. Associated items will also be included in the Pick List window.
- With this option checked the Pick List window will automatically open at the time the parent treatment is added into Medical History.

Utilizing the Pick List Window

- Add the parent treatment in Medical History.
- In the Pick List window choose the entries to post to Medical History by left-clicking on the entries, pressing the Spacebar or using right-click Select. For the number of times you left-click on an associated entry or press the Spacebar, the dispensing quantity will increase for that entry.

Exam

Edit   View   Help

Code	Description	History Type	Quantity	Total Cost	History Price
XRAY	Radiograph - Single Plate.	Treatment	1	0.000	38.10
LUA	Urinalysis	Treatment	1	0.000	55.00
BPM	Blood Pressure Measurement	Treatment	1	0.000	32.00

✓ OK   ✗ Cancel

- The selected entries to be posted will appear at the bottom of the Pick List window and will only be posted to Medical History. Associated items will appear in Pick List and not Inventory Used.
- When ready to post the selected entries click OK.

Code	Description	History Type	Quantity	Total Cost	History Price
XRAY	Radiograph - Single Plate.	Treatment	1	0.000	38.10
LUA	Urinalysis	Treatment	1	0.000	55.00
BPM	Blood Pressure Measurement	Treatment	1	0.000	32.00

Advanced Option for Abnormality Table

A new Advanced Option can be used to copy notes from an abnormality in System Tables to the Medical Condition Record.

- From Hospital Advanced Options search for "Copy Abnormality Notes to MCR" and set it to True. Please note, setting this option to True will overwrite the default text for the Normal and Not Examined fields.
- In System Tables select the Abnormality Table and on the desired entry choose right-click Notes to enter the desired notes.
- Create a medical condition record and in the Objective area click on the appropriate abnormality with the attached notes. The notes will copy over and appear in the displayed note window.

Information Search "Is Payment" Search Option

From the Accounting area of the Information Search a new field, **Is Payments**, has been added to allow for searching on Payments instead of using Accounting Type and listing all payment account types.

The "Is Payments" option works for user specific and preset payments. "Is Payment" applies to these payment types as wells as custom payment types from system tables: P,C,V,M,D,E,O,$,H,%

Problem List E-Travel Sheet Action Code

The Include on E-Travel Sheet action code has been added to the Problem List.

- Use the <, Include on E-Travel Sheet, action code to display the selected problem on the E-Travel sheet.

Drug Refill Security Function

A new security function has been implemented to control the changing of refill information in the Drug Label window.

- As an Administrator access Users and Security
- Secure the function **INV19, Change Refill Information** to allow only authorized users to change the refill options on a prescription that is being refilled.

ASAP Changes for Alabama

The state of Alabama has requested two changes to the ASAP utility, these are listed below:

- If no client date of birth or gender is entered, the patient's date of birth and gender will now be reported.
- If no client driver's license number is entered, 000-00-0005 will now be generated on the report for the patient's ID.

ASAP for Tennessee

Clinics in Tennessee are now required to submit their Controlled Substances in ASAP 4.1 (2009) format. Because of this requirement the state of Tennessee has been added to the ASAP report utility.

To begin generating the report for the State of Tennessee, you are required to:

- Update to AVImark version 2012.1 or higher
- Have your Hospital DEA number assigned on the Demographics tab in Hospital Setup
- Assign your doctor DEA numbers in Users and Security
- Make sure the AVImark items to be reported have the C Action code (denoting it as Controlled Substance) and the NDC number assigned
- Have the "Include Sequence Number option for printing Drug Labels" set to True in advanced options
  - Printing prescription labels through AVImark will assign numbers and maintain them in sequential order. This number will be a unique Rx number that will be printed on the corresponding Drug Label, as well as being reported for that Controlled Substance line entry on the ASAP report.
- Setup the Days Supply for the controlled substances. You will do this in the "Minimum Interval Between Refills" field, on the Pharmacy tab in the change item window of the controlled substance.
- Have the animal's birthdays and genders entered in the patient area.
- Enter each doctor's license number in users and security.

To acquire the properly reported data for your state follow these steps:

- From the AVImark CID select **Utilities**, **Utilities** and type in **ASAP**.
- You will be prompted with a Backup option, if you currently do daily backups you can click No. If you would like AVImark to be backed up, click Yes.
- In the ASAP utility, select the **From** date and **Days to send.**
- For **Export to**, select the location to which you wish to export the file. For example, the C:[ ] option.
- Select your state: **Tennessee**
- Select the option **Only report entries with label notes**. If a Controlled Substance entry in Medical History contains drug label notes, only those entries will be reported when using this option.
- Click **Run**.
- When completed, you will find the .dat file at the location you selected. You may then send this file to the proper authorities.

ASAP for Hawaii

Clinics in Hawaii are now required to submit their Controlled Substances in ASAP 4.1 (2009) format. Because of this requirement the state of Hawaii has been added to the ASAP report utility.

To begin generating the report for the State of Hawaii, you are required to:

- Update to AVImark version 2012.1 or higher
- Have your Hospital DEA number assigned on the Demographics tab in Hospital Setup
- Assign your doctor DEA numbers in Users and Security
- Make sure the AVImark items to be reported have the C Action code (denoting it as Controlled Substance) and the NDC number assigned
- Have the "Include Sequence Number option for printing Drug Labels" set to True in advanced options
  - Printing prescription labels through AVImark will assign numbers and maintain them in sequential order. This number will be a unique Rx number that will be printed on the corresponding Drug Label, as well as being reported for that Controlled Substance line entry on the ASAP report.
- Setup the Days Supply for the controlled substances. You will do this in the "Minimum Interval Between Refills" field, on the Pharmacy tab in the change item window of the controlled substance.
- Have the client's date of birth in the client area,
- Setup an additional client field for the client's gender.
- Enter each doctor's license number in users and security.

To acquire the properly reported data for your state follow these steps:

- From the AVImark CID select **Utilities**, **Utilities** and type in **ASAP**.
- You will be prompted with a Backup option, if you currently do daily backups you can click No. If you would like AVImark to be backed up, click Yes.
- In the ASAP utility, select the **From** date and **Days to send.**
- For **Export to**, select the location to which you wish to export the file. For example, the C:[ ] option.
- Select your state: **Hawaii**
- Select the option **Only report entries with label notes**. If a Controlled Substance entry in Medical History contains drug label notes, only those entries will be reported when using this option.
- Click **Run**.
- When completed, you will find the .dat file at the location you selected. You may then send this file to the proper authorities.

Separating 1 Year and 3 Year Rabies Tag Numbers

Clinics that are required to separate the 1 year and 3 year Rabies Tag numbers now have the ability to do so by utilizing new options in Hospital Advanced Options.

- Access Hospital Advanced Options and search for rabies.
- In order to begin separating the tag numbers you will need to set the option "Separate 1 Year and 3 Year Rabies Tag Numbers" to True.
- Set the starting numbers by using the options "Starting Number for 1 Year Rabies" and "Starting Number for 3 Year Rabies". After selecting the appropriate option click Change to define the value.

The number(s) defined on the Advanced Options will be the first number assigned to the first tag administered after defining the options and then AVImark will auto-increment from that point forward. The reminder interval for the administered rabies treatment will determine if the rabies is a 1 year or a 3 year.

Note: When the new "Separate 1 Year and 3 Year Rabies Tag Numbers" option is set to True, AVImark will always look in advanced options for the next rabies tag number. If a change needs to be made to the sequence, it should be changed in advanced options. For example, the user needs to remove a rabies entry from a patient or the tag number changes, this number will need to be changed in advanced options

AVImark Compliance with MasterCard Partial Approval Mandate

Applications integrated with X-Charge and MPS must support the mandate to ensure they are current with industry standards.
Some key elements of supporting the mandate are:

   • Applications (AVImark) must support multiple tender/payments.   If the amount is partially approved, AVImark is required to prompt for additional tender, such as cash, check, or other credit card payment.
   • If the additional payment declines or is not possible or available, then the partial approval amount must be reversed.
   • Receipts must show the card Balance, if available and returned by X-Charge or MPS.
   • Integrations must be certified for the Partial Approval Mandate.

X-Charge Partial Approval Implementation

AVImark has implemented the following changes in order to comply with the Mastercard Partial Approval for our X-Charge users.

When taking a Mastercard payment (including Debit) that is only approved for part of the payment amount, the AVImark user will be alerted that a secondary form of payment is required to fulfill the payment amount. The message is:

Selecting **Yes** will present a new AVImark Enter Payment window allowing you to select the secondary form of payment to complete the transaction. Both payments will be displayed on the AVImark Invoice as well as the available card balance, if balance information is returned by X-Charge.

If a Debit Mastercard payment is taken there will be no signature line displayed on the Invoice.

Selecting **Cancel** will remove/void the payment completely. This option is recommended, in keeping with the mandate, to be used when a secondary form of payment is not available or has been declined.

Selecting **No** will only place the partially approved payment amount into Accounting and on the Invoice with the remaining amount showing unpaid to the clinic.

Cubex Inventory Management System

With the update to AVImark version 2012.1.0 you will be able to maximize the efficiency of your inventory management with our new integration with the Cubex System. Communication is handled between the computer on the cabinet, myCubex web service, and AVImark.

**Important Note: Internet connection is required for this integration.

To begin setting up the integration between your Cubex System and AVImark you will need the following in AVImark:

- An Excel report containing your Inventory List.
    - To generate the report select File > Print > Inventory List, from the Work With Inventory List.
    - Sort by Code.
    - Select Excel as your "Print To" option.
    - The completed Excel report can be provided to Cubex (support@cubexsystems.com) for cabinet software setup.

- An Excel report containing AVImark user group, name, and ID, information for all users that may be dispensing items from the cabinet. This list can also be generated by AVImark in the following manner:

- Select Work With > Users and Security.
- Highlight the desired category, then select View > Print.
- Select Excel in the "Print To" field, and click Print.
- The completed Excel report can be provided to Cubex (support@cubexsystems.com) for cabinet software setup.

AVImark Advanced Options

Open Advanced Options (wrench icon on the CID), and enter Cubex in the Search field. You can set both default and site values as needed. From here you will need to make the following settings:
- Active – True
- Password – Password as assigned by Cubex
- Site Code – Assigned by Cubex
- Use Cubex pricing when greater than zero – when set to True, if Cubex has a price for any item greater than 0.00, the Cubex price will be charged to the AVImark Medical History and Accounting. If set to True, and the Cubex price for the dispensed item is 0.00, the AVImark price will be the amount billed in AVImark Medical History and Accounting. With the option set to False, the AVImark price will be used for all Medical History and Accounting regardless of the price entered in the Cubex system.
- User Name – Assigned by Cubex
- XML Path – The user defined directory to house the XML file that will remain and be updated with each Cubex transaction data. We recommend the directory be placed within the AVImark directory, and using this setup the value in Advanced Options will look like this: Cubex Transactions (no backslash and folder is named Cubex Transactions).

Feature Use

There is a new automatic polling utility that will run on 30 second intervals to search for any new Cubex transaction data information. This utility will be setup and set to run automatically simply by having Cubex Option set to Active. The utility will be available to open and close manually if desired by accessing the new system tray icon that will be displayed when the utility is running.

To stop this utility manually, right click on the shaking hands and select close. The utility is automatically set to open when AVImark opens and close when AVImark closes. However, if you have unchecked the option to open when AVImark opens, and need to re-launch the utility, you can do so by selecting Utilities > Cubex Polling and the service utility will be restarted.

When an AVImark patient has a checked-in status or has any new unposted entry created (such as a refill or treatment entry) in Medical History, they will become "Active" in the Cubex System and available to be selected for inventory distribution. This communication uses an internet connection to transmit XML information between the systems.

As items are needed from the Cubex cabinet, simply locate the appropriate active patient in the cabinet and enter dispensed information using the keypad. The dispensing information will be queued by myCubex for retrieval by AVImark when the patient is released, checked-out, or posted to the AVImark Invoice and the patient will be de-activated in the Cubex system.

If the qty/amount dispensed from the Cubex cabinet differs from the qty/amount entered into AVImark Medical History for that patient, the qty/amount from the cabinet is considered accurate and will overwrite the qty/amount in Medical History and be the qty/amount posted to the AVImark Accounting. The AVImark on-hand quantity for that item will also be updated to reflect the amount dispensed from the cabinet.

Intelligent Inventory

Intelligent Inventory is designed to improve receiving accuracy. Ordering performed outside the AVImark system (Phone, Fax, Internet, etc.). The distributor passes order information they receive to Intelligent Inventory and AVImark retrieves the info and displays it in the system to make it available for receiving into the AVImark Inventory List.

Creating Your Intelligent Inventory Account

Clinics wishing to utilize the Intelligent Inventory integration within AVImark will need to do the following:
- Register for an account at http://www.intelligentinventory.com to obtain your Gateway Account ID and credentials for using the site and connecting to the Gateway to retrieve purchase orders.
- You will also need to have your account numbers your accounts with participating distributors.

Important Note: Please be aware of the distinction between your Gateway account ID (the ID that identifies you to Intelligent Inventory) and your distributor account ID (the ID that identifies you to Butler/IVESCO/MVS/etc).

Setup

1. Install the IIGateway Service on the AVImark server:
   a. Run the IntelligentInventory.exe self extractor (found in the AVImark folder) to extract the contents into the AVImark folder. This will create an IntelligentInventory subfolder within AVImark containing 12 files.
   b. Run the "Run Me.bat" file (found in the INtelligentInventory subfolder) to install the IIGatewaySvc.
2. From the Services > Intelligent Inventory menu (on the AVImark CID), run the "Get Inventory Items" utility.
3. Enter username/pw/gateway account number credentials provided by Impromed into Intelligent Inventory Configuration found in Services > Intelligent Inventory menu.
4. While still in the Configuration window you can edit the distributor information with the proper Distributor Account Numbers (as assigned by your distributor). You can edit existing displayed distributor information by selecting the appropriate line, and using the E button, or add new ones by using the + button.
5. Start the IIGateway Service found in Windows Services (Start > Services)
6. Set the designated workstation to "set auto process computer" found in AVImark Services > Intelligent Inventory.

Advanced Options
- Auto Process Incoming Purchase Orders – When set to True: This option will allow all Purchase Orders to be imported to the AVImark Inventory Purchase Order list automatically, provided all distributor items contained on that Purchase Order are mapped to an AVImark item.
IMPORTANT: AVImark clinics using the Site Feature will not be able to use the Auto Process Incoming Purchase Orders Option for the Intelligent Inventory feature at this time.

- Computer GUID to Auto Process Intelligent Inventory POs – This will display the computer GUID for the workstation designated by having run the "Set Auto Process Computer"
- Days Before Next Auto Catalog Update (0=do not auto run) –The number entered here will update the distributor's inventory automatically at the given day interval, unless the interval is zero.

- Last Catalog Update - Date the last update took place
- Run Purchase Order Monitor

Services Menu on CID

- Get Inventory Items – This option will update the distributor's inventory. This option performs the manual retrieval of data that occurs automatically when the Catalog Update takes place.
- Review Purchase Orders - Opens the window displaying all available Purchase Orders containing items needing to be mapped to AVImark items and Imported.
- Web Site - Launches the Intelligent Inventory site from within AVImark.
- Set Auto Process Computer - Using this option on an AVImark workstation, will designate that workstation as the computer to be used for processing communications between AVImark and Intelligent Inventory.
- Configure
  o PIMS Account Number
  o Gateway User Name
  o Gateway Password
  o Practice ID – This will be a globally unique, unalterable, identifier that will be automatically generated upon setup.
  o Distributor Information

Important Note: Your Butler Account Number contained in this field must end with the -000 suffix.

Additions to Inventory List

There are three areas within AVImark where users can cross reference or "map" distributor item codes to existing AVImark item codes.

- Inventory List menu – RX Cross Reference > Intelligent Inventory

Confirm

Intelligent Inventory Catalog has not been updated in 4025 days.
Continue anyway?

- Directly from the Change Item window:

20

- From the Import Purchase Orders window:

**Items displayed in bright yellow indicate the item has not yet been cross referenced with an AVImark item code.

If you have an item that you do **not wish to cross-reference to an AVImark item, you can right-click on that item and mark it as a non-inventoried item.

You will receive a confirmation message:

The non-inventoried item will now be displayed with [NI] in the AVI # column in the Review Purchase Orders window and will **not** be included on the Purchase Order when imported.

Should you decide you wish to change a previously designated non-inventoried item to have an AVImark item cross-reference assignment, you can do so by selecting that line item in the Review Purchase Orders window, and right-click to select "Remove non-inventoried designation". This will again allow you to assign your AVImark cross-reference.

Purchase Orders beginning with N indicate a New Order, and those beginning with U indicate an update to an existing Purchase Order. If you attempt to Import a purchase order with a U prefix and haven't yet released the equivalent N order yet, you will receive this warning: **Warning. Could not update this PO. Be sure released PO exists. When you Import the New and corresponding updated order, they will be merged as one order in the AVImark Purchase Order window for receiving.

Feature Use

Once your distributor item codes are associated to AVImark item codes, you are ready to begin automatically importing Intelligent Inventory Purchas Orders so you can receive the items into your AVImark Inventory List.

Upon opening AVImark on the workstation set as the "Auto Process" computer, users could be prompted with a Catalog items prompt. This workstation will also display an Intelligent Inventory Monitor window in the lower right corner of the screen indicating the number of purchase orders ready for review.

Purchase orders that contain a complete list of AVImark/Intelligent Inventory cross referenced items will be automatically imported to the AVImark Inventory List where they can be received/receipted as a typical AVImark generated purchase order.

- To find this list, open the Inventory List, and select File > Order > Choose.

This will display the list of imported purchase orders.

- To receive the items into your AVImark Inventory List, either right-click > select, or double-left click the appropriate order.
- You should now be in the Purchase Order window displaying the details of the order to be received.
- Select Order > Receive

- You will be presented with the following message:

- Press OK and make any necessary adjustments.
- Select Order > Receive again to complete the receipting process.

- Press Continue.
- You will now be back to the Purchase Order list window to process any additional purchase orders.

The received items will be updated in the AVImark Inventory to indicate the item was received. These areas include:
  o On Hand Qty
  o Purchase History
  o Last PO
  o Average Cost information

- BarCode information
- NDC information

One area that will **not** be updated is Expiration Date information.

For Intelligent Inventory purchase orders that contain an item or items that have not yet been cross referenced with AVImark items, orders can still be imported and received. To perform this cross reference and import the purchase order select Services > Intelligent Inventory > Review Purchase Orders.

Once you make your cross reference assignments, you can proceed with Importing your order, and receiving it into your AVImark Inventory List when the order arrives.

ScilVet ABC + Ethernet Connectivity

AVImark has improved connectivity options for the ScilVet ABC + by now also supporting Ethernet connectivity as well as Serial Port connectivity. To connect to your ScilVet ABC + via Ethernet connection, please follow the instructions listed below.

Once you have established your ABC + on your network, you can set it up in AVImark.

Instrument Management

- Select Services > Instrument Management.
- Right-click, New and select Scil Vet ABC Plus
- Select TCP Server as your Protocol.
- Press Next.

- Set Host to 0.0.0.0
- Set Port to 4148
- Press Finish

Test results will be transmitted via the "Run Instrument Import" utility.

Analyzer Time/Date Displayed on Report

AVImark will display the time and date on the result report when a blood analyzer returns the time/date of the test with result data.

Test	Results	Adult ReferenceRange	L	Normal	H
ProCyteTest				Date given: 01-17-12 T3:02p	
WBC	12.6000	5.05-16.76 K/µL			
LYM	2.3000	1.05-5.1 K/µL			

AVImark Compliance with MasterCard Partial Approval Mandate

Applications integrated with X-Charge and MPS must support the mandate to ensure they are current with industry standards.

Some key elements of supporting the mandate are:

      • Applications (AVImark) must support multiple tender/payments.   If the amount is partially approved, AVImark is required to prompt for an additional tender, such as cash, check, or other credit card payment.
      • If the additional payment declines or is not possible or available, then the partial approval amount must be reversed.
      • Receipts must show the card Balance, if available and returned by X-Charge or MPS.
      • Integrations must be certified for the Partial Approval Mandate.

MPS Partial Approval Implementation

When taking a Mastercard payment that is only approved for part of the payment amount, the AVImark user will be alerted that a secondary form of payment is required to fulfill the payment amount. The message is:

Selecting **Yes** will present a new AVImark Enter Payment window allowing you to select the secondary form of payment to complete the transaction. Both payments will be displayed on the AVImark Invoice.

- **Authorization Reversal** - An authorization reversal is a real-time transaction initiated when the customer decides that they do not want to proceed with the transaction, or if the merchant cannot complete the transaction for any reason. Authorization reversals free up the customer's available balance on their debit, prepaid or gift card.

Handling UNPROCESSED Payments

- **Deposit Slip Report:** When a MPS credit card window is manually closed to prevent the payment from being logged, AVImark places a line in Accounting to show as UNPROCESSED. As of version 2012.1, AVImark now list these payments as UNPROCESSED on the Deposit Slip Report.

- **From AVImark Accounting window**: AVImark now allows the ability to remove UNPROCESSED from an Accounting Transaction line. Hospital Administrators can secure this by assigning the security function ACT07 to the administrative group that has authority to enter UNPROCESSED payments into Accounting. (Users authorized to ACT13)

  Once UNPROCESSED has been added into Accounting, in the case that the payment type needs to be changed, AVImark allows the user to manually change this transaction line by doing right-click Change and selecting Cash, Check or another card.

  > Example of when this is necessary:
  >
  > > 1. If the internet is down the clinic can choose to leave record of the payment in accounting as UNPROCESSED.
  > >
  > > 2. When the internet comes back on, authorized users can right-click Change and select the correct card, Cash or Check.
  >
  > Once the transaction IS processed AVImark allows the following:
  >
  > > 1.   Allows the UNPROCESSED line to be changed.
  > >
  > > 2.   Changes the color of the entry in Accounting from green to black.
  > >
  > > 3.   Records the change in Accounting Entry History of the payment to show that it was originally unprocessed and someone processed the transaction manually.
  > >
  > > 4.   Displays correctly on the Deposit slip so the payment isn't allowed to show as UNPROCESSED.

Miscellaneous MPS Enhancements

- The MX850 integration now prevents the total from having to be verified when hand keying a card; it still requires a signature from the client.

- When hand keying a transaction, once the month field is populated by entering 2 digits, the year field is now automatically tabbed to and highlighted for easier entry.

- AmEx card verification has been increased to look at the first TWO digits of the card and will now allow the "change type" to work appropriately.

2012.1 Fixes List

Accounting:
3375 - Two Invoices Being Created
If two users, on two different computers clicked close on an invoice at the exact same time on the same client, two invoices were being created; one was a blank invoice.

Additional Data Fields:
3247 - Cannot Cancel Additional Data Field if No Name is Entered
If a name is not entered, for an additional data field, clicking cancel caused the following message: "Named is a required field. Please enter a name."

2100 - Error when More Stuff Name is Data

When CopyAVImarkFiles was run, the reminder templates were being duplicated in the target data.

3752 - CopyAVImarkFiles Not Copying All System Tables
The CopyAVImarkFiles utility was not copying all the system tables entries.

3543 – CopyAVImarkFiles Search Criteria Copy Option Fails
When running CopyAVImarkFiles, the search criteria was not being imported from the source data.

1143 - Remove Utility Was Not Removing Balance Brought Forward

Whiteboard:
834 - Whiteboard Option "View "(All)" Users By Default" Does not Work Correctly
If the option "View "(All)" Users By Default" is set to True, the Whiteboard...Schedule Tab will default to (all).

2897 - Error Sending DelPrt to Excel
Attempting to run the DelPrt utility and sending the results to Excel was causing the following error: "List index out of bounds (8)."

Work List:
908 - Work List Entry Removal not Being Included in "Entry History"
When a work list entry is removed, the removal will now be included in entry history.

795 - Notes Showing Incorrectly for Declined Work-List Entry
When Advanced Option "Allow Multiple Work List Entries Per Patient" was set to TRUE; declining a medical history entry that added an entry to the work list, the wrong notes were printing when the work list was printed. This fix will only work with future entries; past entries will still print incorrectly.

2012.1.2.0 Fixes List

3865 - 9 Action Code Charging Tax by Package Cost Not Item Cost
The 9 action code was causing tax to be charged on the package cost, instead of the item cost.

2012.1.3.0 Fixes List

3921 - Changing Medical History Changes Reminder Due Dates
When any change was made to a medical history entry, the reminder tab acted as if a right click defaults was performed. This was removing patient specific reminders and suspended reminders.

3899 – SQL - Unable to Mark a Patient Deceased
When double left-clicking in the "Deceased" field of patient information on CID screen; the following error was displayed: "Cannot focus a disabled or invisible window".

3898 - Backdating Accounting Causes Entires to be on Wrong Invoice
If accounting was backdated, these backdated entries were being put on the prior invoice, instead of creating their own invoice.

2012.1.4.0 Fixes List

4095 - Pick List Deducting Duplicates from On Hand
When using the pick list, a duplicate amount was being deducted from the on hand.

2012.1.5.0 Fixes List

4071 - Using Same As Not Working Correctly
When using the Same As option for site, the inventory list was not being displayed correctly.
