

ImproMed® Release Notes

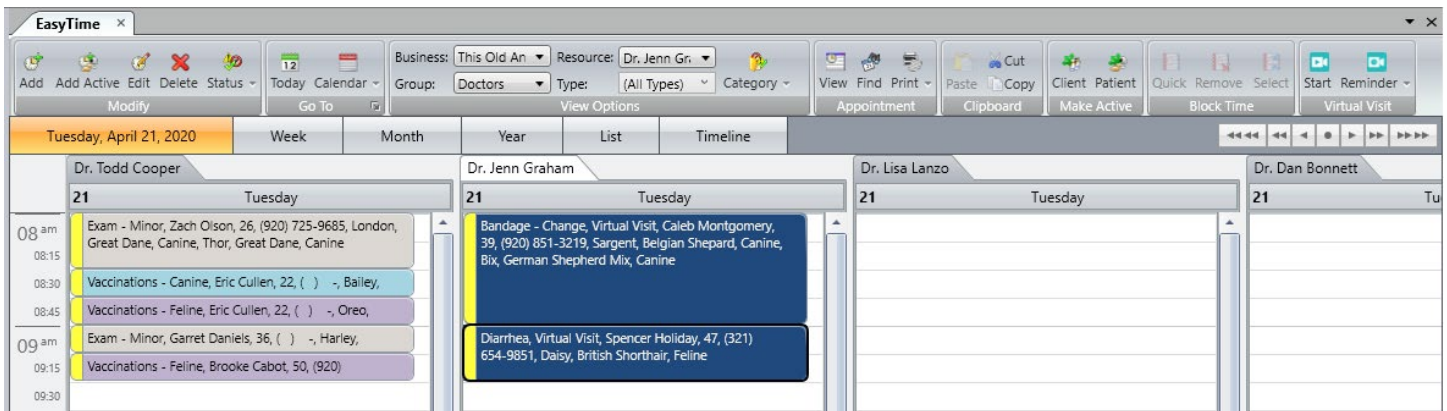

Version 19.21.0

What's New

ImproMed has integrated the use of telecommunications in order to provide patient health care at a distance.

▶ Virtual visits

Telemedicine helps work around distancing and can improve access to veterinary services that may not be available to clients unable to leave their home. Telemedicine can also be used to save patients in critical care and emergency situations or for quick follow-up visits. The client calls the veterinary business and, with telemedicine, may be able to get medical advice or a prescription from the veterinarian.

ImproMed Release Notes

Version 19.21.0
